Java for FTC Workshop

Presented by FTC Team 8404 Quixilver
https://tinyurl.com/8404kickoff2019

About Our Team

- 6th year team
- Leland High School, Almaden
- 15 members from 8th - 12th grade
- Control Award at Champs 2019

Agenda

1. Introduction of FTC control system (10 min)
2. Project Set Up in Android Studio (10 min)
3. Simple OpMode (15 min)
4. Execution of programs (5 min)
5. Q/A Session (10 min)

The FTC Control System - Robot Controller

The FTC Control System - Driver Station

Choosing Phones

Considerations

- Android 8.0 Oreo or higher
- 5ghz WiFi
- Fast Processor (for computer vision)

Our Picks

1. Samsung Galaxy S5 (running LineageOS ROM) for fastest speed
2. Motorola Moto E5 for an easier purchase

Set Up Phones

- Enable USB debugging
- Turn on airplane mode
- Connect WiFi direct

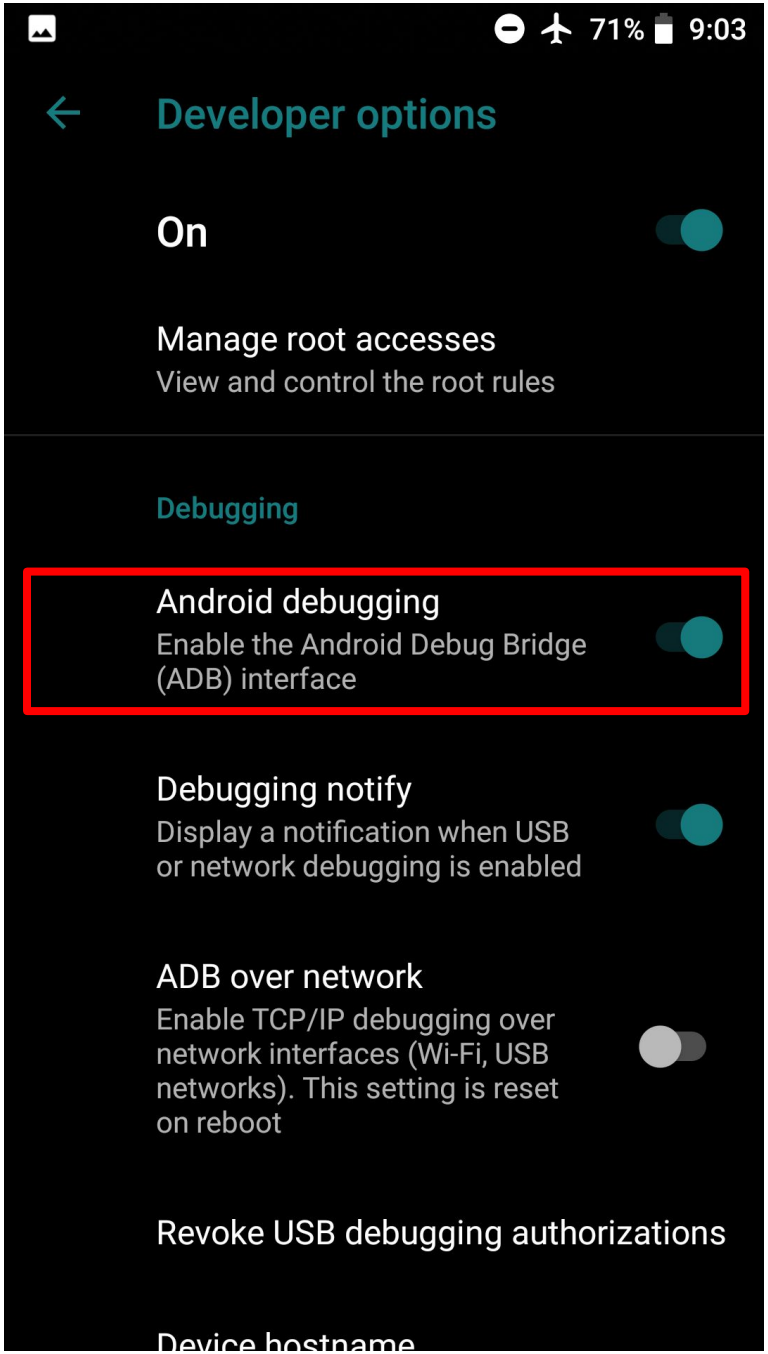
72% 9:00
Developer options
On
Always allow Wi-Fi Roam Scans
Allow/Disallow Wi-Fi Roam Scans based on the amount of data traffic present at the interface
Mobile data always active
Always keep mobile data active, even when Wi-Fi is active (for fast network switching).
Tethering hardware acceleration
Use tethering hardware acceleration if available
Select USB Configuration
Charging
Show Bluetooth devices without names
Bluetooth devices without names (MAC addresses only) will be displayed



71% 9:03
Developer options
On
Manage root accesses
View and control the root rules
Debugging
Android debugging
Enable the Android Debug Bridge (ADB) interface
Debugging notify
Display a notification when USB or network debugging is enabled
ADB over network
Enable TCP/IP debugging over network interfaces (Wi-Fi, USB networks). This setting is reset on reboot
Revoke USB debugging authorizations
Device hostname

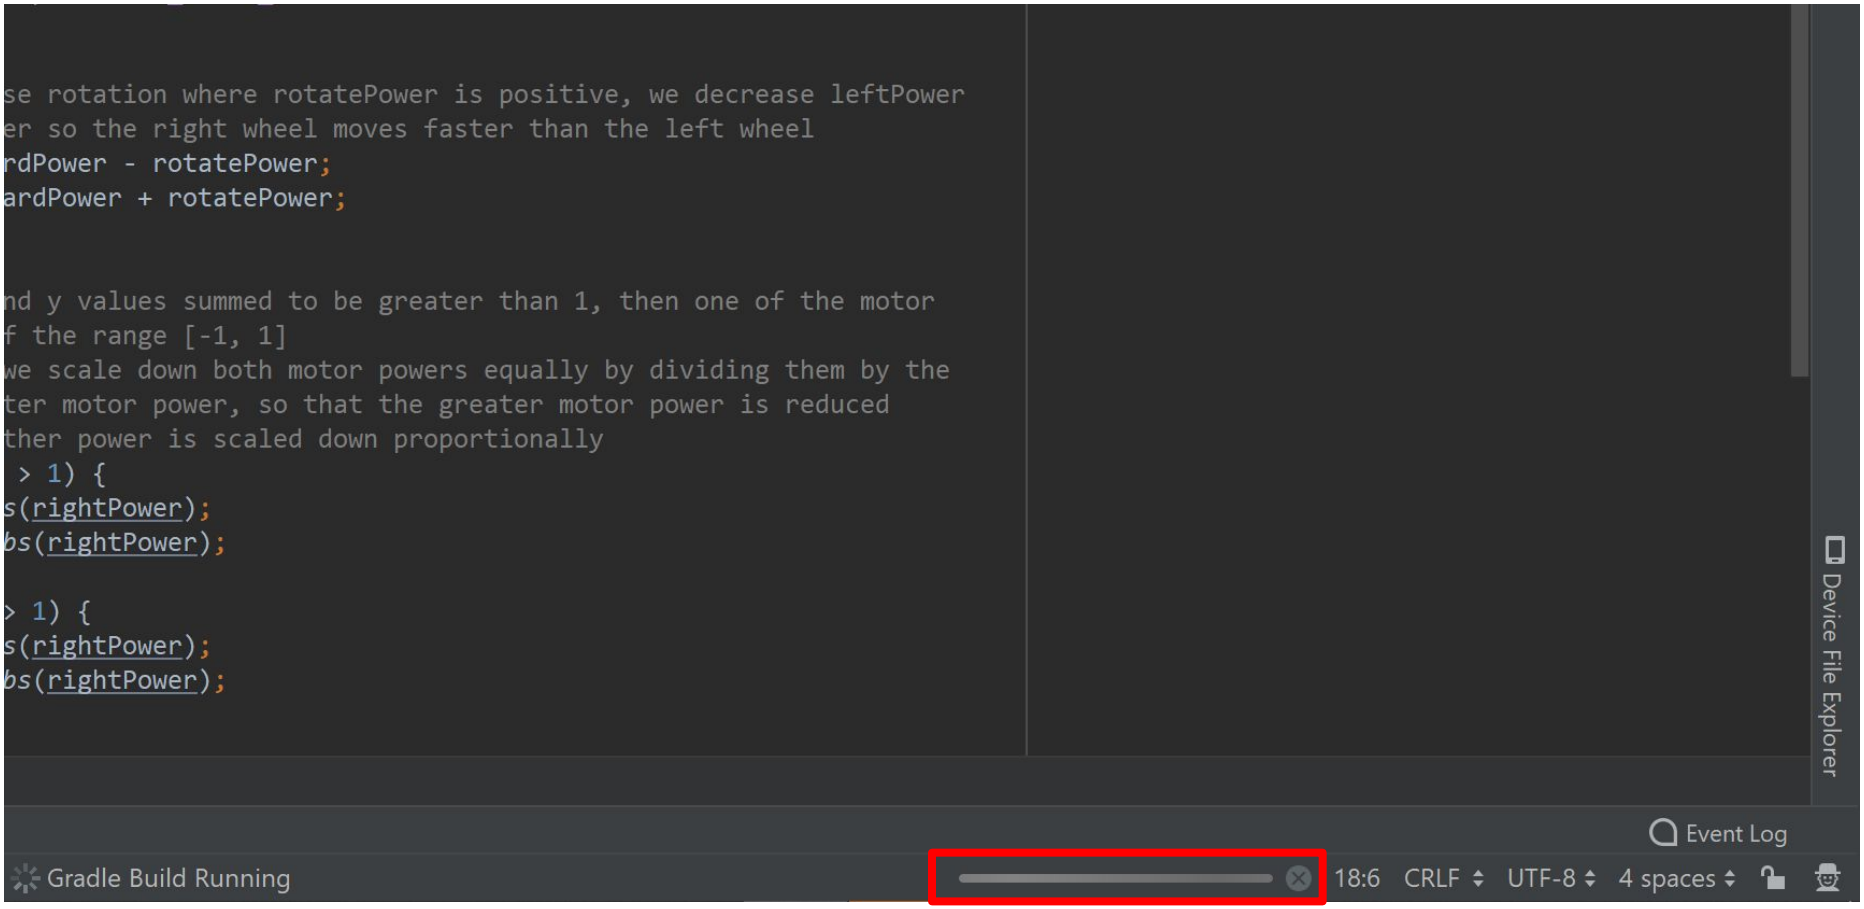
Uploading Code to the Robot Controller Phone

1. Use a USB cable to plug the phone into your computer
2. Accept the “Trust this computer” pop-up in android
3. Select the run button in Android Studio
4. Wait for Android studio to compile and transfer the code



se rotation where rotatePower is positive, we decrease leftPower
er so the right wheel moves faster than the left wheel
rdPower - rotatePower;
ardPower + rotatePower;
nd y values summed to be greater than 1, then one of the motor
f the range [-1, 1]
we scale down both motor powers equally by dividing them by the
ter motor power, so that the greater motor power is reduced
ther power is scaled down proportionally
> 1) {
s(rightPower);
bs(rightPower);
> 1) {
s(rightPower);
bs(rightPower);
